EXAM: X-RAY CHEST, PA AND LATERAL

HISTORY: Motor vehicle accident x4 months. Rib pain

TECHNIQUE: PA and lateral views.

COMPARISON: None available.

FINDINGS: PA and lateral views of the chest are available. The heart and midline structures are unremarkable. No significant atherosclerotic calcification of the thoracic aorta is seen. There is no visible pneumothorax with the lungs clear of an acute process. However there is questionable deformity involving the posterior aspect of the right second rib and posterior aspect of the left fourth and seventh ribs consistent with prior injury of indeterminate age. Rib detail films would be of benefit for further evaluation.

IMPRESSION: No active disease. Rib deformities bilaterally as indicated and fracture deformities of indeterminate age are questioned with rib detail films recommended

End of diagnostic report for accession: 23657695
