**\*\*Effective August 31, 2020, LabCorp is implementing an improved\*\***  
equation to calculate Low Density Lipoprotein Cholesterol (LDL-C)  
concentrations, to be used in all lipid panels that report calculated  
LDL-C. This equation was developed through a collaboration with the  
National Heart, Lung and Blood Institutes of Health (NIH). [1] The NIH  
calculation overcomes the limitations of the existing Friedewald  
LDL-C equation and performs equally well in both fasting and  
non-fasting individuals.
