**EXAM: X-RAY ABDOMEN COMPLETE, 2 VIEWS**

**HISTORY:** Severe abdominal pain.

**TECHNIQUE:** Supine AP view of the abdomen.

**COMPARISON:** None available.

**FINDINGS:** The lung bases are clear. The bowel gas pattern is normal and nonspecific. There is no evidence of bowel obstruction. There are several similar rounded densities in the left upper quadrant, probably representing recently ingested food particle in the stomach. The osseous structures are unremarkable.

**IMPRESSION:**

Several nonspecific subcentimeter rounded densities in the left upper quadrant, probably representing recently ingested food particles and less likely intra-abdominal calcifications. There is persistent clinical concern, consider further evaluation with CT of abdomen and pelvis.

Otherwise, normal study.

If the referring physician would like to speak to the radiologist, please call 909-982-8638.
